

Notion Orchestration Layer

Argos Multilingual Frontier AI Data Services BU

What the current way of working consumes each year, what the layer gives back, and how long it takes to pay for itself. Every volume in this pack was returned by your own team.

PREPARED FOR CHRIS & MITCHELL ISON · BY SYLVAIN RAMARADJOU · RAMA LOGIC

12 AUGUST 2026 · CONFIDENTIAL

You already described the problem

"I'm usually firefighting most days rather than building something productive."

CHRIS · END-TO-END PROCESS WORKSHOP, 23 JULY 2026

That is not a people problem. Each tool in the BU owns a noun. None of them owns the work in progress, so people are the integration layer, by hand, every day. Four numbers, then the decision.

2,480 h

BURNED EVERY YEAR
MOVING FACTS BETWEEN
PLACES

About 1.4 full-time people,
on volumes your team
returned on 11 August.

1,140 h

GIVEN BACK, 25 HOURS
EVERY WEEK

46% of the total. We claim
the haircut, not the gross
number.

18,500 €

ONE-OFF, EXCL. VAT

Back inside the first year:
3.9 to 7.8 months
depending on your loaded
hourly cost.

1.7 - 3.4

PEOPLE HIRED JUST TO
READ CVS

What your own x100
application target forces, if
the process stays manual.

The decision today: green light Phase 2. Kickoff the week of 14 September, live 23 October. Everything after this slide is the evidence behind those four numbers.

BEFORE ANYTHING ELSE

Where the money is real, and where it is not

A saved hour is not a saved euro. So we separate three floors and never add them into one number. Only the first is cash leaving or entering the BU.

01 · HARD CASH · MONEY THAT MOVES

18,500 €

Once, 50% at kickoff, 50% at go-live.
Then the licence line.

Asana retired -2,400 € / yr
Notion Business, AI in +4,700 € / yr

Net +2,300 € / yr

Tools cost more after, not less.
We would rather you read that
here than find it later.

02 · CAPACITY · TIME, NOT YET MONEY

1,140 h / yr

25 hours a week, about 0.65 of a full-time person, spread across six functions.

Nobody leaves and no salary line disappears. This becomes a euro only when those hours absorb growth you would otherwise have staffed, or cancel a hire you were about to make.

DO NOT COUNT THIS TWICE WITH FLOOR 03

03 · AVOIDED HIRES · THE P&L LINE

120,000 - 240,000 €

A year of hiring the current process makes mandatory, at a 40 € loaded hour.

Your sheet says applications must increase x100. Today 50 to 100 a month. x100 is 60,000 to 120,000 a year. At 3 minutes a CV, read one by one, that is **3,000 to 6,000 hours**, or 1.7 to 3.4 people, before a single vendor is onboarded.

THIS IS THE LINE THAT CHANGES, OR DOES NOT

Floor 01 is cash. Floor 02 is time. Floor 03 is hiring you do not have to do. Adding them together would give a number nobody can defend, so we never do it.

04 · MARGIN, DELIBERATELY NOT COSTED

One point of margin recovered across 35+ projects a year outweighs this engagement. We cannot price it without your average revenue per project, so we leave it at zero rather than invent it.

01 / 06

What we found

Three hours of your team's honesty, and two walkthroughs of the systems underneath.

What this audit covered

Four things, and they are all the same thing

/ F1 · ORCHESTRATION

You have systems of record. You have no orchestration layer.

XTRF knows the money. Myriad knows the production. Nobody knows the state of the work.

Every role asked for the same thing first: one screen.

/ F2 · DUPLICATION

The same fact is typed again, and again, and again.

One vendor on one batch exists in eleven places [M]. Two teams copy the same facts to each other, line by line.

"Supply chain does not interact with our trackers."

/ F3 · MARGIN

Your margin lives in one person's spreadsheet.

Buy rate, sell rate and margin per vendor exist in the supply chain master tracker, and nowhere you can query.

Not visible on any dashboard, by anyone.

/ F4 · FRAUD

Fraud screening is a manual tax that grows with you.

CVs reviewed one by one. Candidates declare one country and enter another. Interviews scheduled by hand.

It scales with volume, and your own sheet says applications must increase x100. [A]

02 / 06

The tool landscape

Everything the BU runs on, and where a single fact actually lives.

THE INVENTORY

What one business unit runs on

22

APPLICATIONS

10

SPREADSHEET FAMILIES

APPLICATIONS

XTRF	Myriad	Asana	Vendra	Google Sheets	Google Drive	SharePoint	Outlook	Teams	Slack	Upwork
TangoCard	LinkedIn	GMS	Social ads	inATS	HubSpot	Salesforce	Tableau	Jira	Notion	Zoom / Meet

SPREADSHEETS, WHERE THE ORCHESTRATION ACTUALLY HAPPENS

S1 · Supply chain master tracker	S2 · Vendor / referral tracker	S3 · Weekly payment report	
S4 · PM project tracker (one per PM)	S5 · PM reference tab	S6 · PM contacted tab	S7 · QA team trackers
S8 · Myriad payment export	S9 · Dev standup tracker	S10 · Queries tracker	

The orchestration lives in none of the 22 applications. It lives in the spreadsheets, several of them personal, held together by copy-paste between people.

WHAT MOVES

Five tools die. Three stay. One layer appears.

REPLACED – THEIR CONTENT POURS INTO NOTION

Asana	→
S1 · Supply chain master tracker	→
S2 · Vendor / referral tracker	→
S4-S6 · PM project trackers	→
S7 · QA team trackers	→
S9-S10 · Standup & queries	→

KEPT – CONNECTED, NEVER REWRITTEN

↔	XTRF · money
↔	Myriad · production
↔	Vendra · paperwork
↔	Tableau · finance reporting
↔	Salesforce / HubSpot · the CRM
↔	Drive · files
↔	Outlook / Teams · talking
↔	Upwork / TangoCard · paying

Nothing you rely on gets switched off. What disappears is the spreadsheet layer that was holding the other tools together by hand.

THE PRINCIPLE

Write once, read everywhere

A fact is entered one time, by the person closest to it, and it appears everywhere it is needed. Three real examples from your own operation.

"This vendor is excluded, no response"	TODAY The PM writes it in her tracker, then opens the supply chain tracker and copies it across one by one. If she does not, supply chain never knows and the next project contacts the person again.	AFTER One field. It appears on the Supply Chain Board, on the vendor record with its reason, in the funnel counts, and in the team memory next year.
"The agreed buy rate is 20 USD"	TODAY Negotiated by supply chain, typed into the master tracker, copied by the PM into her tracker, typed again into XTRF at PO time. Three entries, three chances to diverge.	AFTER Entered once. Margin computes itself, rolls up to the project, and lands on your dashboard against target.
"Test result: borderline"	TODAY Quality writes it in their tracker, then re-enters it in the PM's tracker in order to talk to them. Supply chain reads it somewhere else again.	AFTER One record. It updates the vendor history, the funnel, the performance flag and the Quality Board, in the same second.

One owner, one home, and everyone else gets a **view**, never a copy. That is the difference between ten spreadsheets and one system, and it is why the trackers can actually die.

03 / 06

What it costs

The cause underneath the four findings, the number it produces every year, and the three levers that bring it back.

Where the hours actually go

Supply chain shared inbox you said 20-30 h/wk per person [A] → 20 × 45 wks [E], 1 person only = 900 h		900 h
Answering vendor queries during production you said 10 h/wk [A] → 10 × 45 wks = 450 h		450 h
Re-typing the same fact from one tracker into another you said 8 h/wk [A] → 8 × 45 wks = 360 h		360 h
Sourcing and the referral tracker you said 6-8 h/wk [A] → 6 × 45 wks = 270 h		270 h
The weekly payment report and Upwork releases you said 6 h/wk [A] → 6 × 45 wks = 270 h		270 h
Purchase orders typed by hand you said 50 POs/project, 35+ projects/yr [A] → 35 × 50 × 4 min [M] ÷ 60 = 117 h		117 h
Onboarding vendors one by one you said 30-50/month [A] → 30 × 12 × 8.5 min [M] ÷ 60 = 51 h		51 h
Project closure and case-study prep you said 1 h per closed project [A] → 1 × 35 = 35 h		35 h
Fraud screening, CV by CV you said 50-100/month [A] → 50 × 12 × 3 min [M] ÷ 60 = 30 h		30 h

TOTAL, ON THE LOW END OF EVERY RANGE

2,480 h/year

≈ 1.4 full-time people, doing nothing but moving facts between places.

ON THE HIGH END OF THE SAME RANGES

4,470 h ≈ 2.5 people

2 people on the inbox at 30 h/wk, 50 vendors and 100 applications a month.

HOW THE TOTAL IS BUILT

900 + 450 + 360 + 270 + 270 + 117 + 51 + 35 + 30 = **2,483 h**, rounded to 2,480.
2,480 ÷ 1,750 h per full-time person = **1.4**.

45 weeks a year and 1,750 h per person are ours [E]. The times in minutes were timed on the walkthroughs [M]. A5 and B3 not returned, not counted.

None of this is a people problem. The work has no home, so people are the integration layer, and you pay 1.4 to 2.5 salaries for that job.

THE ROOT CAUSE

Your tools each own a noun. Nobody owns the verb.

XTRF owns the money. Myriad owns the production. Vendra owns the paperwork. Every tool holds a thing. Not one of them holds the work in progress, so the only place it exists is in spreadsheets and in people's heads. That is why adding a tool has never fixed it, and why Asana did not stick.

IF NOTHING CHANGES

Every hour on the previous slide is linear in volume. Your own answer on applications was "50 to 100 a month, and this needs to increase x100". At 3 minutes a CV, screened one by one, x100 is 3,000 to 6,000 hours a year: between 1.7 and 3.4 extra people hired to read CVs, before a single one is onboarded.

The team does not break at 2x. It breaks where the growth plan meets a process that only scales by hiring.

WHERE WE ARE GOING

TODAY

Four trackers, one per team, none talking

Margin in a private spreadsheet column

50 POs a project, typed from a manual export

Quality tracked nowhere

"I ask people for movement updates"

AFTER

One staffing line, read by everyone

Margin against target, on your screen

The lines assembled, ready to issue

Every check owned, scored and attached to the vendor

One screen, every morning, no meeting

The hours are yours. So is the rate.

We have deliberately not picked a loaded hourly cost for you. Find your blended figure in the left column and read across: that row is your number, built on volumes your own team returned.

Annual cost = hours × your loaded hourly cost. Example on the highlighted row: **2,480 h × 40 € = 99,200 €**. High-end column: **4,470 h × 40 € = 178,800 €**.

BLEND	LOADED COST	CONSERVATIVE · 2,480 H	HIGH END · 4,470 H
25 € / hour		62,000 €	111,750 €
30 € / hour		74,400 €	134,100 €
40 € / hour		99,200 €	178,800 €
50 € / hour		124,000 €	223,500 €

EVERY YEAR

This is not a one-off cost. It is paid again in full every twelve months, and it grows with volume.

SOURCED, LINE BY LINE

Volumes stated by your team on 11 August [A], the low end of every range. Three task times in minutes were timed during the walkthroughs [M]. Working weeks and hours per person are ours [E].

STILL UNDERSTATED

Visibility rebuilt by hand was not costed at all, and neither was the Asana licence. Both only push the number up.

Three levers, and one of them goes the wrong way

01 · MORE WORK THROUGH, FASTER

**120,000 -
240,000 €**

A year of hiring avoided at the x100 application target, at a 40 € loaded hour. That is the part of this lever we can put a number on today: growth absorbed at constant headcount.

The revenue half needs one figure you have not given us: average revenue per project, and how many projects you turned down or pushed for lack of capacity. Then your own formula, unit price times volume, finishes the sentence.

02 · TIME SAVED

25 h / week

1,140 hours a year, given back across six functions. The re-typing goes, the judgement stays: a fact is entered once, by the person closest to it.

at 25 € / h	630 € / week
at 40 € / h	1,000 € / week
at 50 € / h	1,265 € / week

Spread over six functions this is about two hours per person per week, which is exactly why it is a capacity number and not a cost cut. Nobody leaves. The two hours go back into the work.

03 · COST OF TOOLS

+2,300 € / year

Asana comes off the board at 2,400 € a year on 20 assumed seats [E]. Notion Business with AI comes on at 4,700 € a year on the same count.

So the third lever is negative. Tools cost more after this project than before, and the other two levers have to carry it. They do: 2,300 € against 28,500 to 57,000 € given back every year.

Read weekly, the way you asked for it: 25 hours a week back into the BU, about 1,000 € a week at a 40 € loaded hour, against 2,300 € a year more on licences.

FOUR FIGURES STILL MISSING, AND WHO WE NEED THEM FROM

C1 · loaded hourly cost,
blended

C2 · headcount per
function

C6 · real Asana seats and
tier

C7 · revenue per project,
projects refused

04 / 06

The system

One orchestration layer on top of the systems you keep.

Notion orchestrates. The others keep what they own.

No writes into XTRF. No changes to Myriad. Nothing duplicated from the Vendor Hub. Bridges run one direction each, and the Vendor Hub bridge is inside this fee.

Throughput & Delivery Forecast

ASKED FOR BY NAME ON 4 AUGUST · INSIDE THE FEE

"Forecasting throughput and delivery on a daily and weekly basis... that'll get up to a higher aggregate level of how we're tracking against milestones."

MITCHELL ISON · 4 AUGUST 2026

WHAT IT READS

Every batch: volume committed, unit, and the date it is due

Volume processed to date, read from Myriad through the bridge

The staffing lines: who is on it, and at what daily capacity

Working days left before the milestone

WHAT IT ANSWERS, EVERY MORNING

Units per day and per week, by batch and by project, actual against required

The delivery date the current run rate actually produces, next to the one you committed

The aggregate: how the BU is tracking against its milestones this week

Volume times unit price, so the same view reads in revenue, not only in units

WHAT IT NEEDS TO BE HONEST

Volume recorded per batch, per day. Nothing does that today, which is why no forecast exists today. The layer records it from go-live.

Unit price on the project record and the milestone date on the batch, both entered at intake

History. The first weeks after go-live are a baseline, not a prediction, and we will say so rather than show you a confident curve built on two data points.

It lives as a tab on the GM Command Center and on the Program Cockpit, it is built in Sprint 3, and it is inside the fee. It is the one screen that turns the layer from a record of what happened into a projection of what lands.

WHY THIS APPROACH

The three alternatives, taken seriously

VS TURNING ON XTRF WORKFLOWS

A fair question, and worth asking internally: XTRF ships a workflow engine, templates and job offers, and other Argos teams use them. This BU does not.

But XTRF orchestrates XTRF. It does not orchestrate Myriad, Vendra, Asana, Drive, Outlook and ten spreadsheets. The gap is between the tools, which is exactly where XTRF cannot reach.

WITH YOUR VENDOR HUB, NOT AGAINST IT

You are building it now, and it should stay yours: it owns recruiting, onboarding, documents and performance, end to end.

It answers "who is this vendor". It does not answer "where is this project". The bridge between the two is in this fee, so a quality score dropping in the hub shows up on the project view without anyone re-typing it.

VS DOING NOTHING THIS YEAR

Defensible if volumes were flat. They are not. Your own written answer on applications was "this needs to increase x100".

Every cost in this pack scales linearly with that. The spreadsheets do not fail loudly, they fail as a slow tax on every person, and by then the knowledge has already left with whoever owned the file.

One finding worth acting on regardless of this proposal: check whether the XTRF Vendor Portal module is already in your licence. Your vendors already log in and invoice there.

THE OBJECTION WE WOULD RAISE OURSELVES

Asana did not stick here. This is built the other way round.

WHY IT FAILED, IN THREE LINES

It was added beside the trackers, not instead of them. Nothing was retired, so the spreadsheets stayed the real system and Asana became a second place to update.

It held tasks, not the work. No vendor, no batch, no rate, no quality check, so the state of a project could never live there.

Nobody's morning changed. Opening it was extra effort with no view they could not get elsewhere, and extra effort always loses.

THE STRUCTURAL DIFFERENCE, IN THREE LINES

It replaces the four trackers. At go-live they are frozen read-only. There is no second place to update, because there is no first place left.

It holds the nouns and the verb. Projects, batches, vendors, staffing, rates, quality checks. The state of the work has a home, so the spreadsheet has no job.

It is piloted on 2 to 3 live projects from Sprint 1, with one named champion per function trained during the build, not demonstrated at the end.

THE ADOPTION GUARANTEE, WITH A NUMBER ATTACHED

Day 30

Measured together, 30 days after go-live.
Not a feeling, not a survey.

THE CRITERION

The four trackers are frozen read-only, and every project opened after go-live was created in Notion. Both true, or the criterion is missed.

THE CONSEQUENCE IF IT IS MISSED

The adoption window extends from 30 to 90 days at no extra cost, with a weekly working session on the blockers, until both are true. Matching a brief is not adoption. Asana matched its brief too.

If I disappear on 1 November, what do you own?

ONE CONSULTANT · SAID OUT LOUD

Rama Logic is one person. That is a real risk on a system you intend to run the BU on, so it is designed out rather than argued away.

The workspace is created in **your** Notion account on day 1. You hold the licence and the admin rights. Nothing runs on our infrastructure.

One named Argos admin is trained during the build, not handed a manual at the end.

The SOP pack documents every automation in plain language, screen by screen.

Notion is a standard with a partner ecosystem. Any Notion partner can read this build and take it over.

Native export to Markdown and CSV at any time. No proprietary runtime, no code you cannot open.

WHAT YOUR IT WILL ASK

Buy and sell rates, freelancer personal data, client names under NDA. The questions are legitimate and they get answered in writing before anything is loaded.

Hosting, encryption and sub-processors: Notion is the processor, and we put their DPA, sub-processor list and hosting answer in front of your IT before kickoff, for sign-off.

GDPR: Argos stays the data controller. We sign your NDA and your DPA, and we are a French company under the same regulation.

Access is by role and by page. Rates stay visible to the people who see them today, and to nobody else.

Client names under NDA sit in a restricted group, not in an open database.

Vendor personal data never moves. The Vendor Hub stays master. Notion reads an ID, a status and a quality score. No CVs, no identity documents, no bank details.

The honest answer to the question in the title: you own a documented workspace inside your own tenant, an admin who was trained while it was being built, and an export button. Nothing about this depends on me still being here.

05 / 06

The plan

Three sprints, the timeline, and what we need from you.

Three sprints, live on 23 October

SPRINT 1 · 14-25 SEP

Project backbone

Projects, Batches, Clients, Tasks, Meetings. The 12-phase lifecycle, the intake form, the Program Cockpit and the Project One-Pager. Piloted on 2-3 live projects.

WHAT WE NEED FROM YOU

Admin access to a Notion workspace on the Business plan with AI, in your own tenant

Read access to Asana, the project Drive folders and the four trackers

2-3 live projects for the Sprint 1 pilot, and a tracker export for Sprint 2

The named people who clear a flagged candidate, and the Argos admin who will own the workspace

The Vendor Hub prototype link, a technical contact, and its API or export by the start of Sprint 2

One champion per function for training and adoption

SPRINT 2 · 28 SEP-9 OCT

Vendor funnel & quality

Vendors, Staffing with rates and margin, QA Checks, the sourcing form, onboarding and offboarding checklists, the fraud flag and its review queue, the Supply Chain Board.

IF THE VENDOR HUB IS NOT READY

The hub is a prototype and its timeline is not ours to promise, so the plan does not depend on it.

If the API is not available at the start of Sprint 2, the vendor funnel ships standalone: sourcing form, funnel statuses, onboarding and offboarding checklists, fraud queue. Nothing in Sprint 2 waits.

The bridge is then connected when the hub ships, inside the same fee. **The 23 October go-live holds either way.**

SPRINT 3 · 12-23 OCT

Screens, AI, adoption

The seven morning screens, the Throughput & Delivery Forecast, the XTRF and Vendor Hub bridges, the Meeting Agent, the SOP pack, the named admin handover and two full days of training. Go-live.

WHY SEPTEMBER

Mid-September puts the build after the summer, when your Program Director is back from leave and the teams are at full strength. She owns most of what Sprint 1 needs.

It also means the pilot runs on live autumn projects rather than on a half-staffed August, which is the difference between a system that gets adopted and one that gets looked at.

We do not claim to remove all 2,480 hours

Writing once and reading everywhere kills the re-typing. It does not kill the conversations. Here is the haircut, line by line, with the mechanism behind each one.

LINE & MECHANISM	TODAY	REMOVED [E]	SAVED
Re-typing one fact from tracker to tracker entered once, read everywhere	360 h	90%	324 h
Weekly payment report becomes a view on the batches	270 h	70%	189 h
Sourcing and the referral tracker the funnel replaces the spreadsheet	270 h	60%	162 h
Purchase orders lines assembled, a human still issues	117 h	70%	82 h
Project closure the data is already in the project	35 h	70%	25 h
Onboarding vendors checklist and form, one vendor at a time	51 h	50%	26 h
Fraud screening flag and review queue, a human still decides	30 h	50%	15 h
Vendor queries in production logged and templated, still answered by a person	450 h	30%	135 h
Supply chain shared inbox the three questions that fill the alias stop needing to be asked	900 h	20%	180 h

GIVEN BACK, EVERY YEAR

1,140_h

Out of 2,480. That is **46%**. Every figure in this pack is built on it, not on the gross number.

STILL MANUAL AFTER

1,340_h

Mostly the inbox and the vendor conversations, which your own Vendor Hub attacks, not this layer.

THE 180 HOURS ON THE INBOX LINE

Three questions stop being asked: where is my project, am I staffed, when am I paid. We claim 20%, we measure incoming mail in month 1, and we say so if the drop does not appear.

THE NINE PERCENTAGES ARE OURS
[E]

Nobody gave us a recovery rate, so we set them and own them. Each is tied to the mechanism on its line, and the first review after go-live compares them to what happened.

A one-off fee against a cost you pay every year

PHASE 2A + 2B, ONE-OFF

18,500 €

EXCL. VAT · 50% KICKOFF, 50% GO-LIVE

GIVEN BACK, EVERY YEAR

28,500 – 57,000 €

The 1,140 hours of the previous page, priced between 25 and 50 € an hour. Not the gross 2,480.

THE LICENCE LINE, HONESTLY

Asana retired -2,400 € / yr
Notion Business, AI included +4,700 € / yr

Net, every year +2,300 €

Not in the table opposite.
Against 28,500 to 57,000 € given back, it moves the payback by weeks, not months.

GO-LIVE 23 OCTOBER

Breakeven lands between February and June 2027 on these figures.

IF YOUR RATE IS	GIVEN BACK / YEAR	PAYBACK	YEAR-ONE NET
25 € / h	28,500 €	7.8 months	10,000 € net
30 € / h	34,200 €	6.5 months	15,700 € net
40 € / h	45,600 €	4.9 months	27,100 € net
50 € / h	57,000 €	3.9 months	38,500 € net
Payback = 18,500 € ÷ given back per year × 12 months. Highlighted row: 18,500 ÷ 45,600 × 12 = 4.9 months. Year-one net = given back - fee. Worst case on this page: the fee is back inside the first year, on 46% of the hours, before a single point of margin is recovered, and after paying for the heavier licence.			

YEAR TWO ONWARD

The fee is not paid again. What it gives back is. Only the optional Operate run continues, at 1,500 € a month.

IF WE ARE HALF WRONG

Halve the 1,140 hours on top of the haircut and the fee still returns inside 24 months.

The next two years, with and without the layer

Cumulative cost from go-live, at 40 € an hour, licences on both sides, volumes flat. Flat works against us: your target is growth.
This page prices floor 02, capacity: time valued at a rate, not cash in a bank account.

CUMULATIVE	WITHOUT	WITH	DIFFERENCE
Month 6	50,800 €	47,650 €	3,150 €
Month 12	101,600 €	76,800 €	24,800 €
Month 18	152,400 €	105,950 €	46,450 €
Month 24	203,200 €	135,100 €	68,100 €
Without = 2,480 h × 40 € + Asana 2,400 € = 101,600 € a year. With = 18,500 € once, then 1,340 h × 40 € + Notion 4,700 € = 58,300 € a year. Crossover in month 6, then roughly 3,600 € a month in the BU's favour.			

THE LICENCE LINE, BOTH WAYS

+2,300 € / year

Asana out: Starter tier at 10.99 \$ per user per month billed annually, 20 assumed seats [E], 2,400 € a year. On the Advanced tier it is 5,500 €.
Notion in: Business at 19.50 per seat per month billed annually, AI included, same seat count, 4,700 € a year.

GIVE US THE REAL SEAT COUNT AND TIER AND BOTH LINES BECOME EXACT.

THE GAP AT 24 MONTHS, BY RATE

25 € / h	33,900 €
30 € / h	45,300 €
40 € / h	68,100 €
50 € / h	90,900 €

Read this page carefully: 203,200 € is not a cheque anybody signs. It is salary you already pay, spent on moving facts between places. The only hard cash on this page is 18,500 € once and 2,300 € a year more on licences.

The decision on the table today

DEADLINES HELD

Every deliverable lands on the day agreed.
If one will not, you hear it from me 48 hours before, not after.

TRANSPARENCY

A weekly 30-minute checkpoint, a shared workspace updated live, and an answer within 24 hours.

ADOPTION GUARANTEE, MEASURED

Day 30 after go-live: the four trackers frozen read-only, every new project created in Notion. Missed, and the adoption window extends to 90 days at no extra cost.

PHASE 2A + 2B · COMMITTED TOGETHER · FIXED FEE

Notion Orchestration Layer

18,500 €

EXCL. VAT · 50% AT KICKOFF, 50% AT GO-LIVE

Against 28,500 to 57,000 € given back every year, and 2,300 € a year more on licences. Back inside the first year, and 68,100 € ahead at 24 months on the 40 € row.

EVERYTHING IN THE FEE

8 databases, the 12-phase lifecycle and the vendor funnel, 10 automations, the seven morning screens, the **Throughput & Delivery Forecast**, the **Vendor Hub bridge**, the Meeting Agent, the fraud review queue, the SOP pack, the named Argos admin handover, two full days of training, and the 30-day adoption window with the day-30 criterion.

GO-LIVE 23 OCTOBER 2026 · RATE PREFERENTIAL TO THE TWO PHASES TAKEN SEPARATELY

OPTIONS, PRICED SEPARATELY, DECIDED WHENEVER YOU WANT

A · Client progress portal on quote B · Agentic pack on quote

C · XTRF read-only sync 3,200 - 4,800 €

D · Weekly payment run on quote Operate · ongoing run, optional 1,500 € / month

None of these are needed for the 23 October go-live

CONFIDENTIAL · PREPARED FOR ARGOS MULTILINGUAL

THANK YOU

One place where the work actually lives.

Thank you to the nine of you who gave three hours of honesty, and to Melina and Valeria for walking me through the systems underneath. That is the raw material this proposal is built on.

DECISION

Green light on Phase 2

KICKOFF

Week of 14 September

GO-LIVE

23 October 2026
