[F/AI × Notion]

From company context to AI that gets work done.

Sylvain Ramaradjou · Rama Logic · 3 Nov 2026

Rama Logic

STATION F

[the idea in one line]

Notion is the context of your business.

[the problem]

Every AI you use starts from zero about your company.

[the cost]

So you explain your company again. And again. And again.

We are a B2B startup that...

We are a B2B startup that...

We are a B2B startup that...

[in the chat]

What did you have to re-explain to an AI this week?

[the shift]

Models stopped being the bottleneck. Context did not.

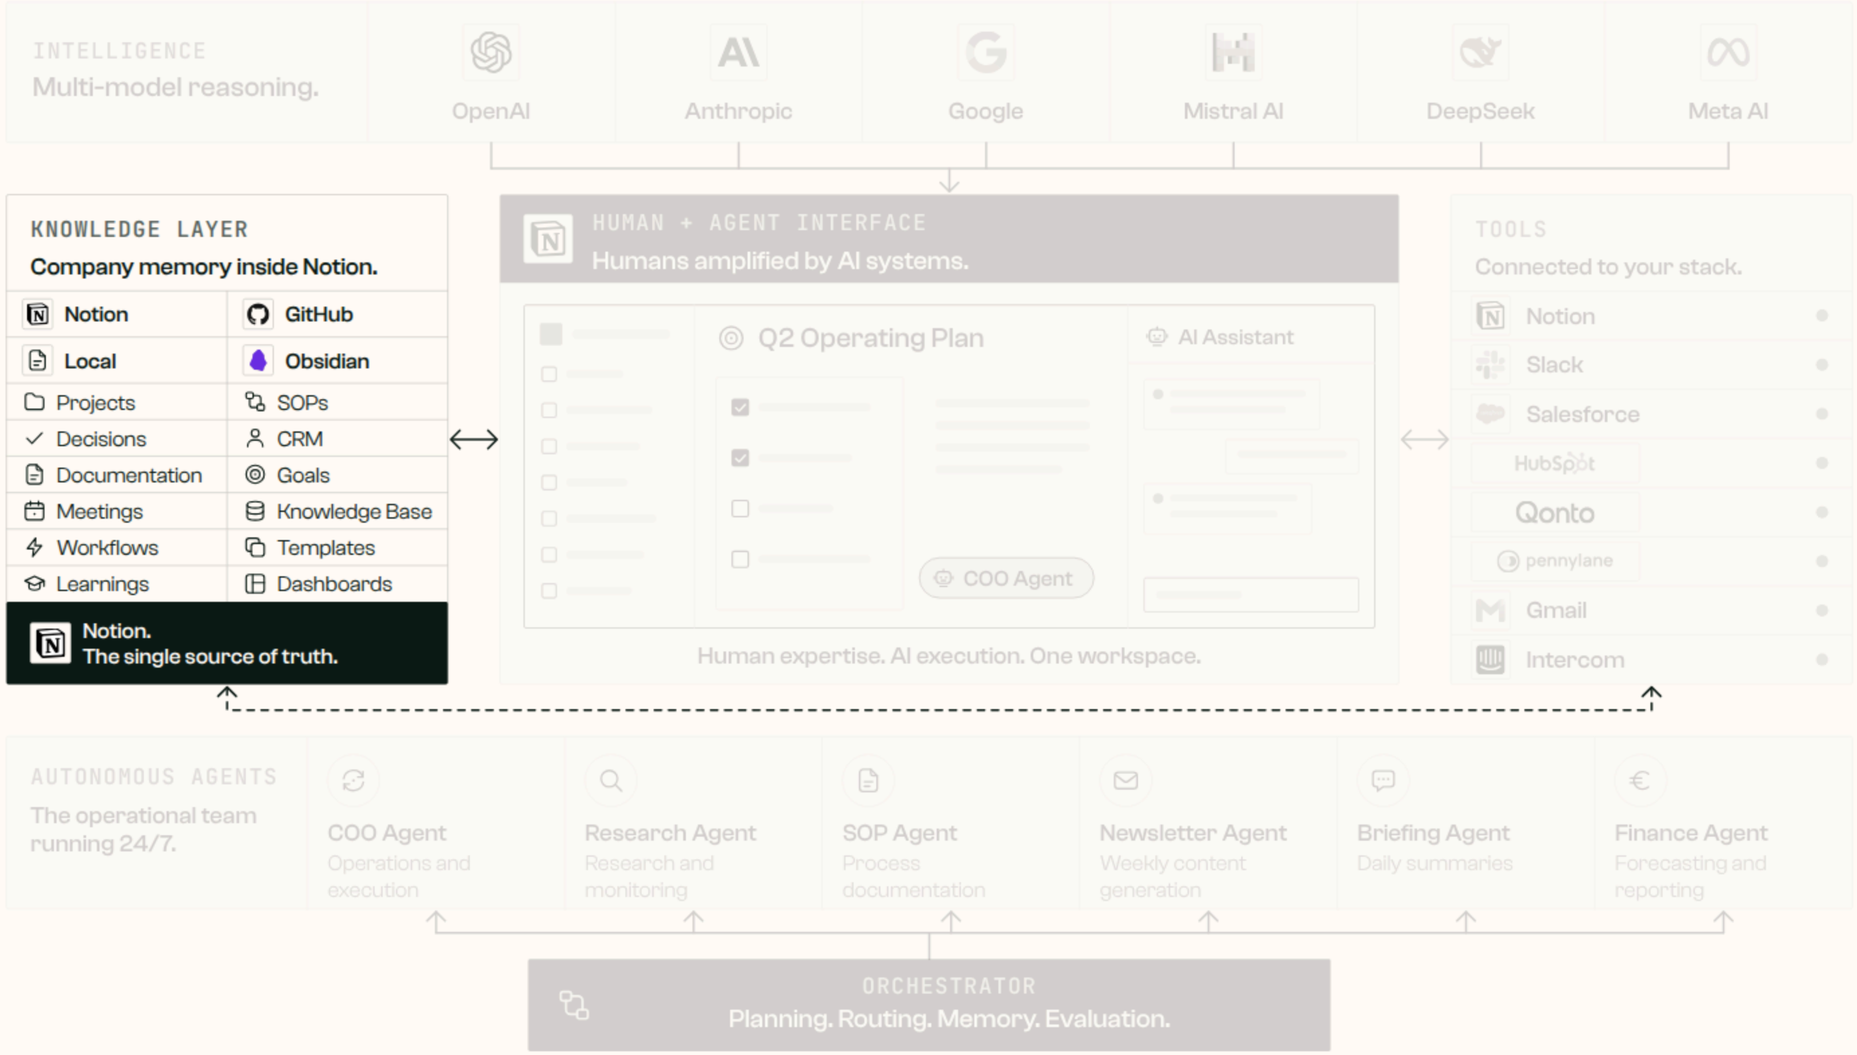

[the habit]

Write your company down once. Let every AI read it.

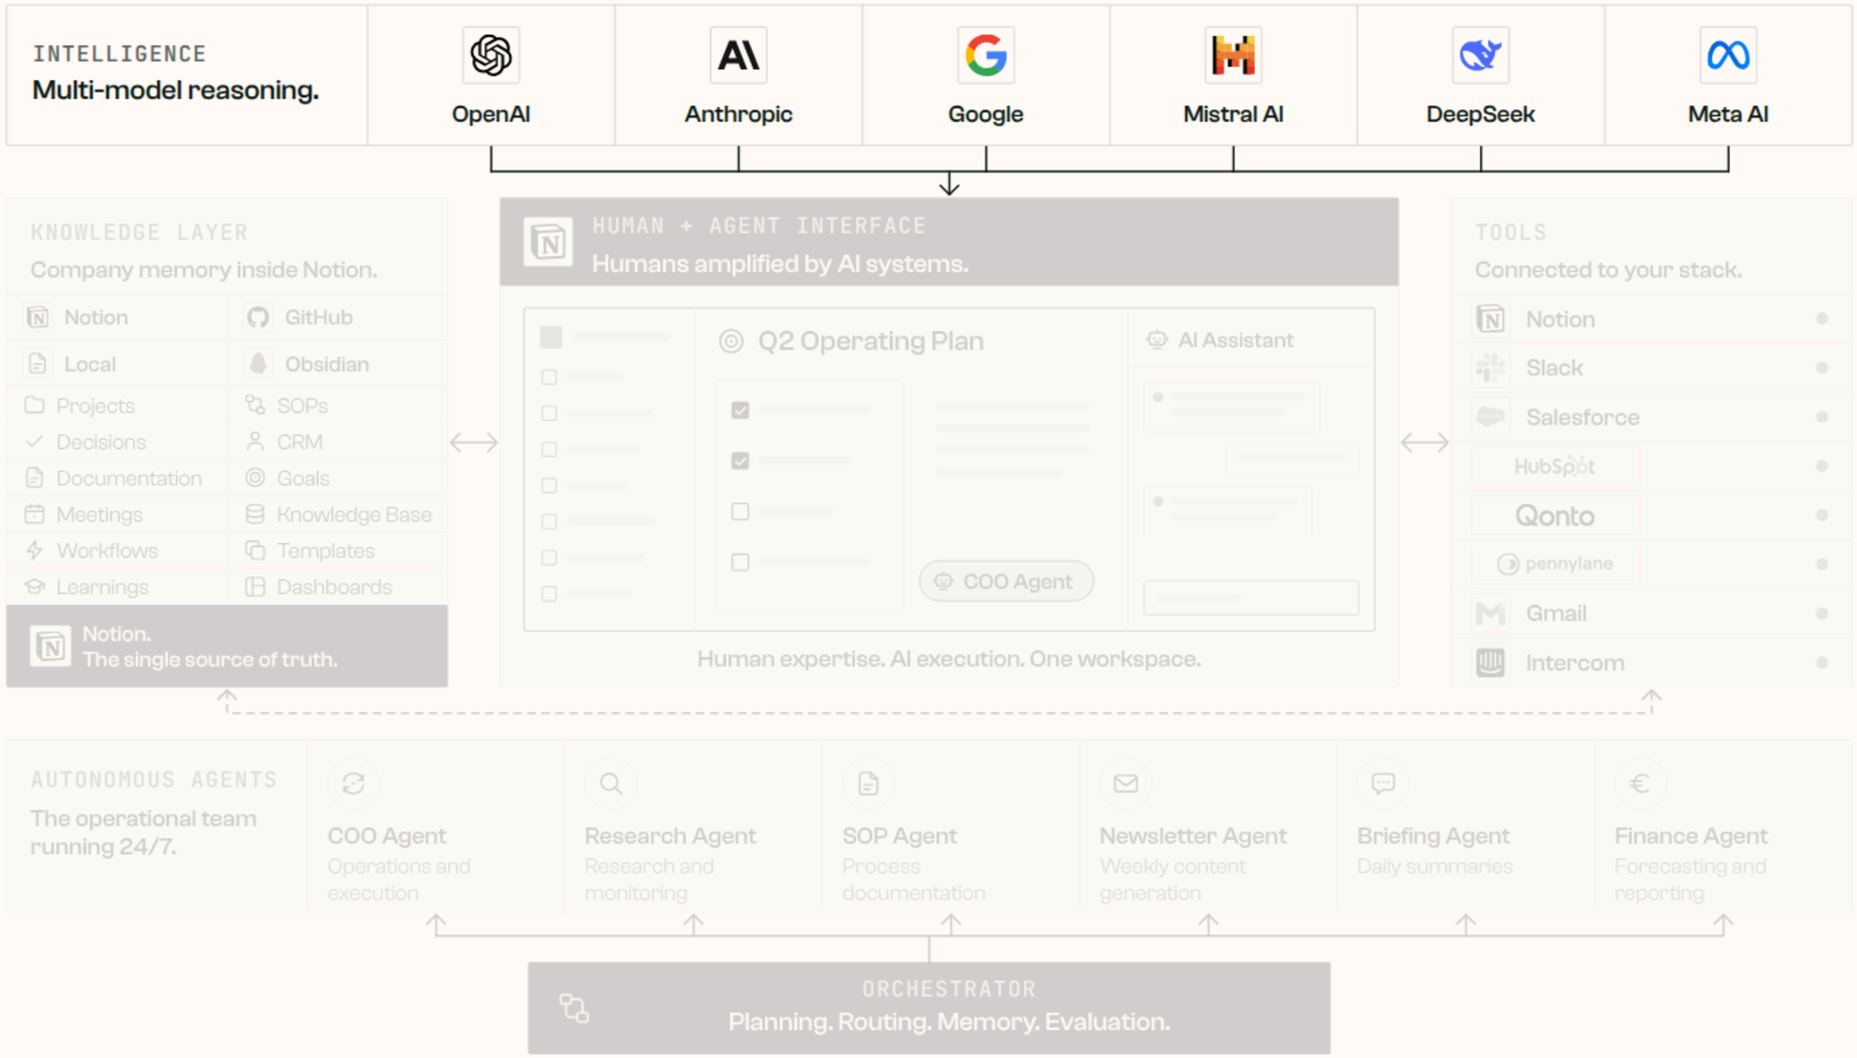

[the culture angle]

Your written culture becomes your AI's context.

It starts with your company's memory, in Notion.

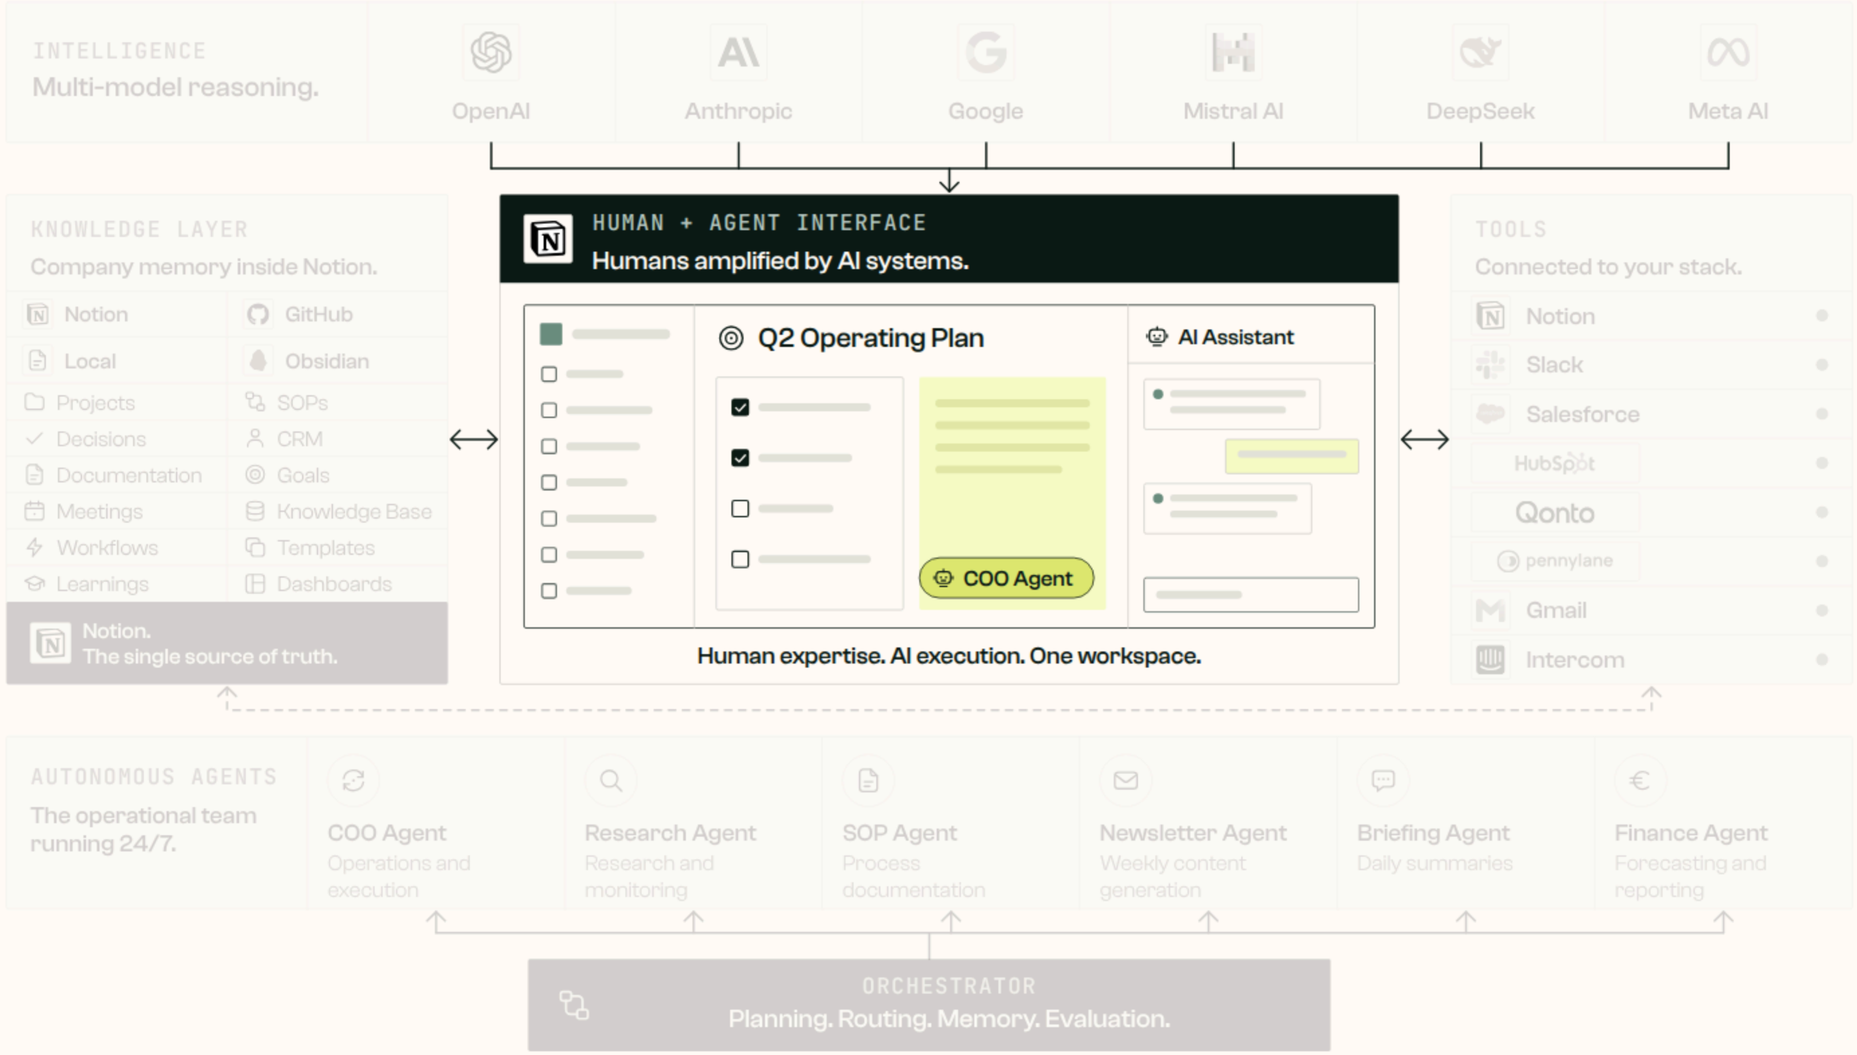

On top, the models. Several, not one.

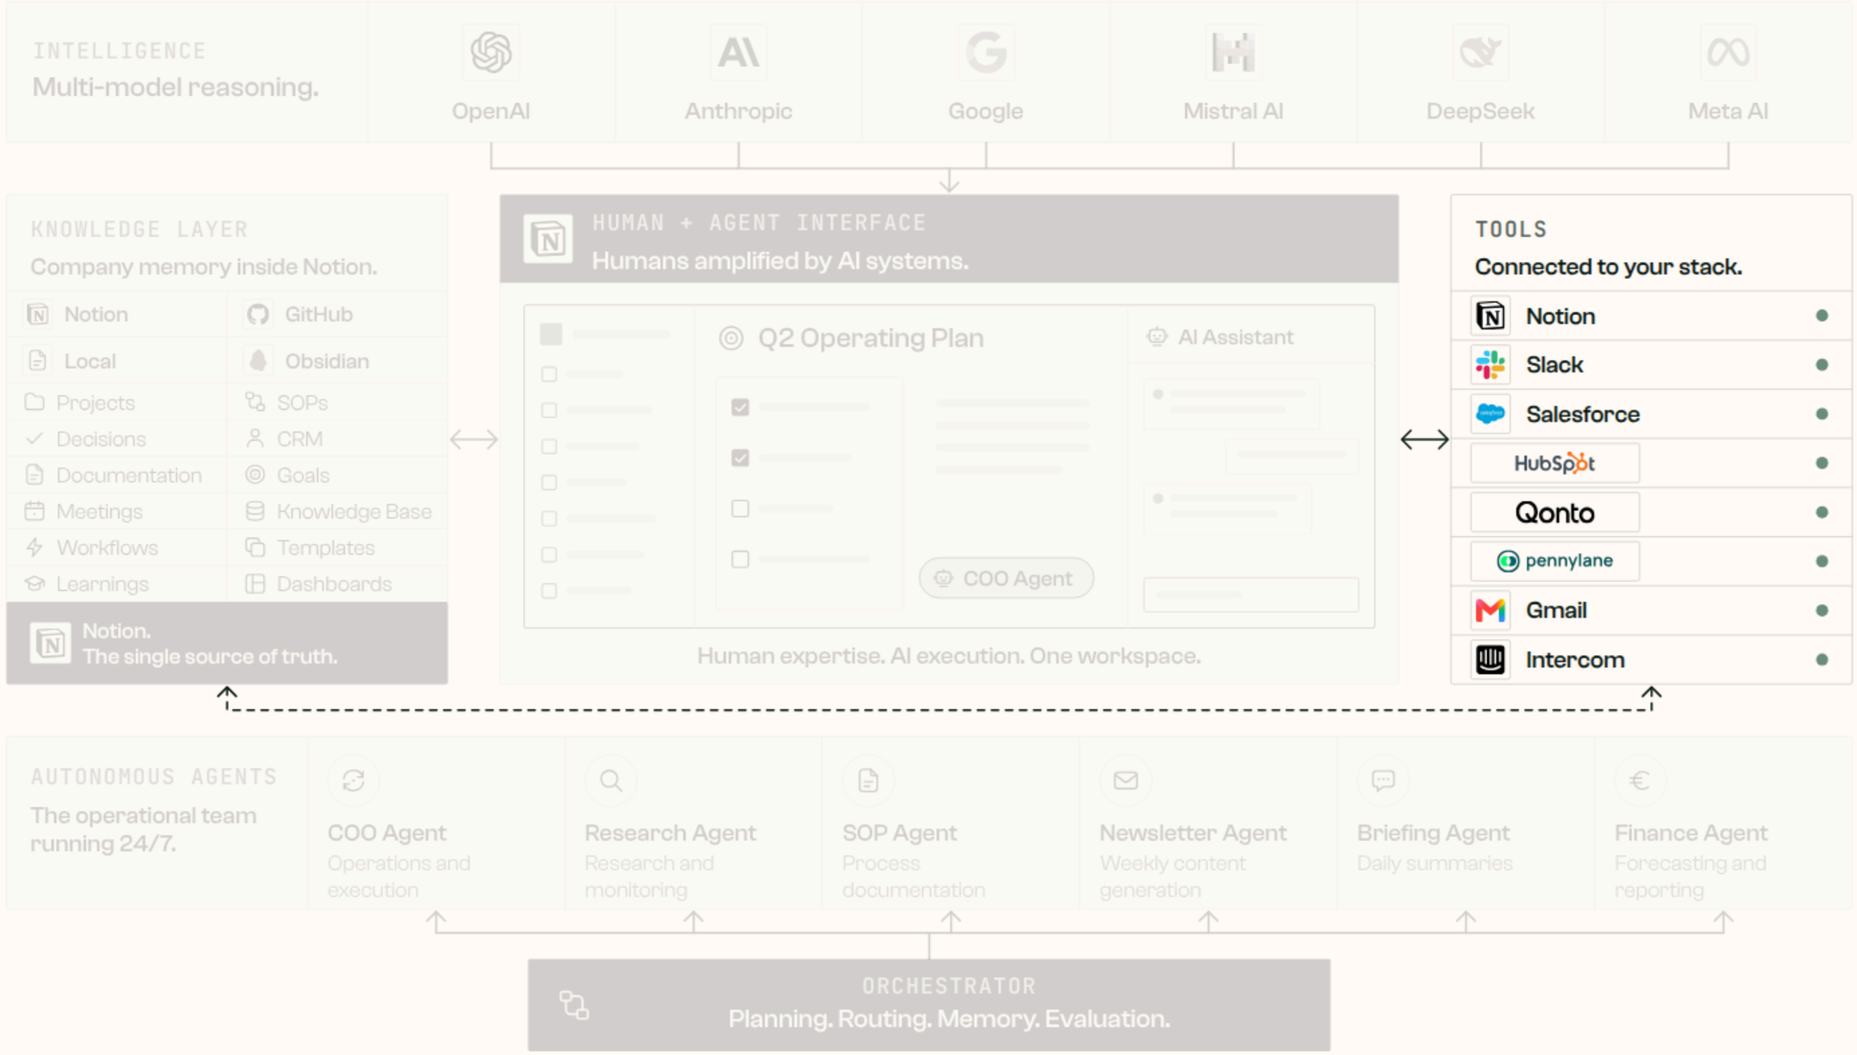

[the architecture · interface]

In the middle, one workspace for humans and agents.

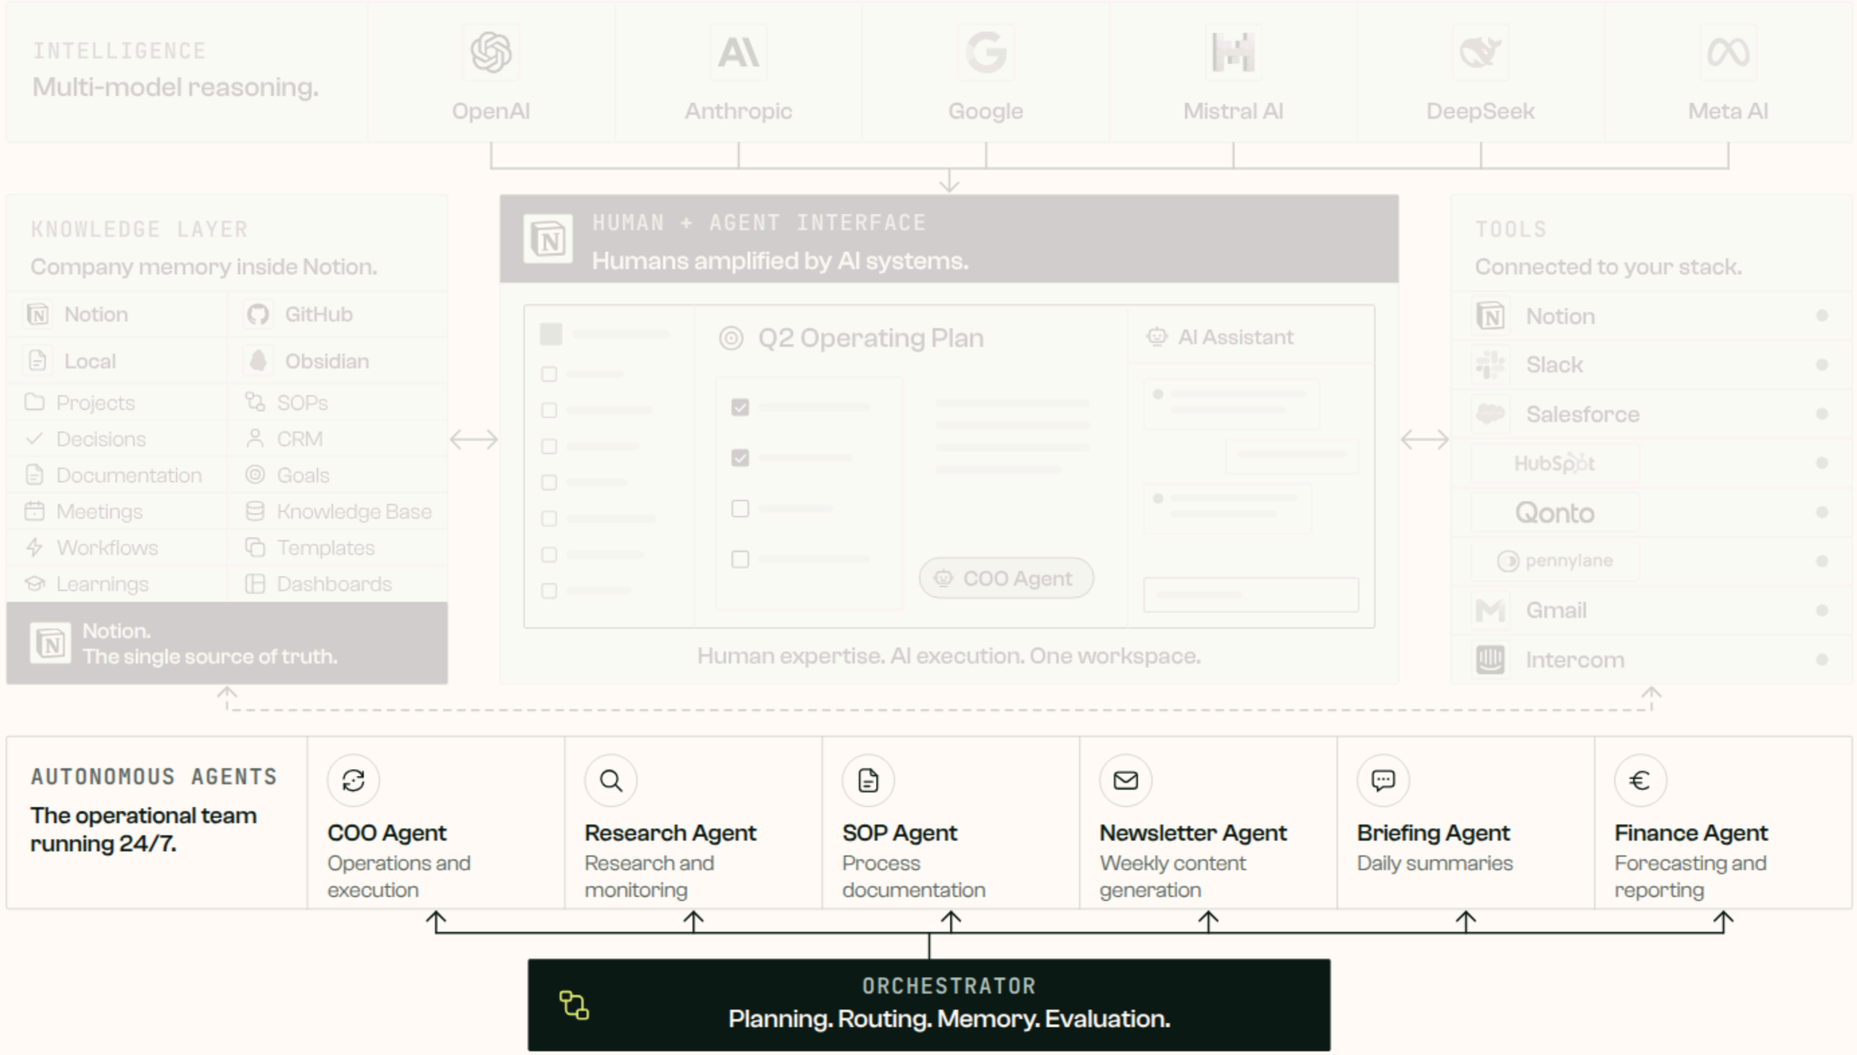

[the architecture · tools]

On the right, the tools you already use.

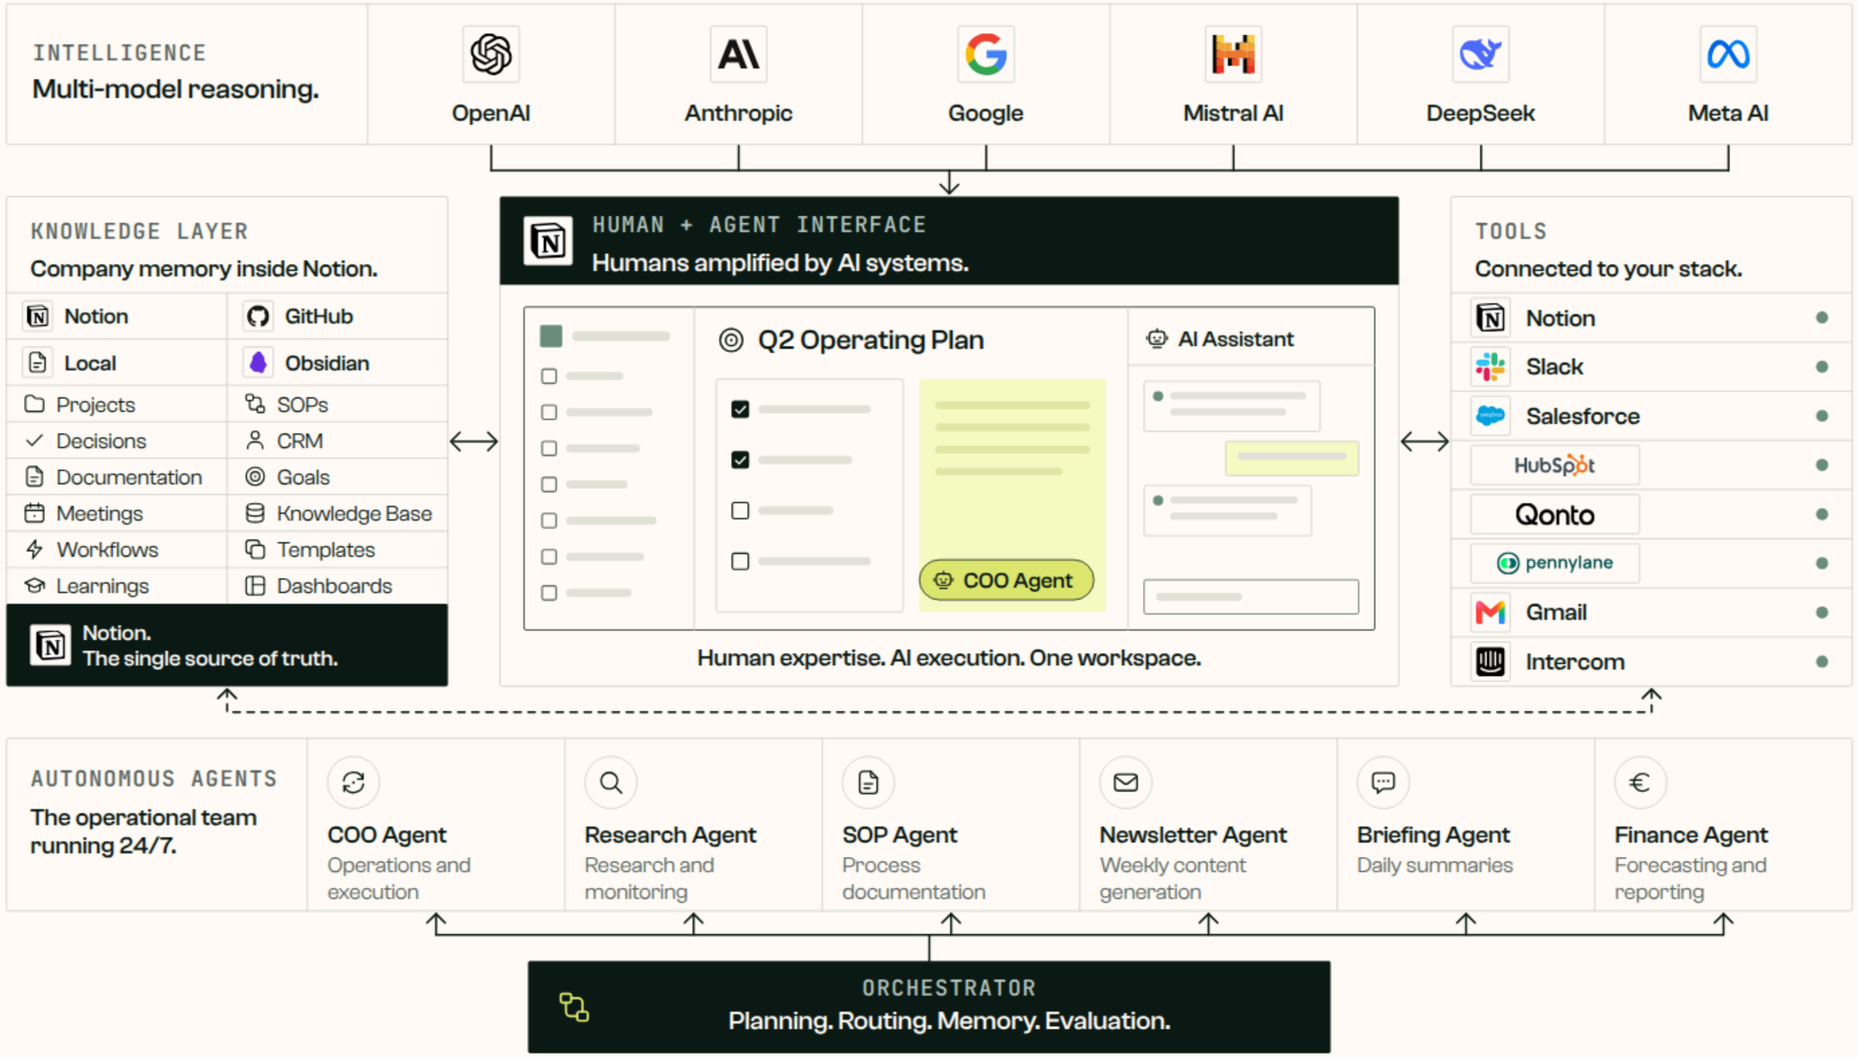

[the architecture · agents]

Below, the agents. One orchestrator routes the work.

[the architecture]

AI is not a model. It's a system.

[proof · rama logic]

I run my own company this way.

my AI's instructions file · rewritten from notion every night at 05:00

[every night]

Every night, my Notion is copied into my AI's memory.

[in numbers]

53 databases. 61 robots. One source of truth.

[the result]

My robots never ask me who my customers are.

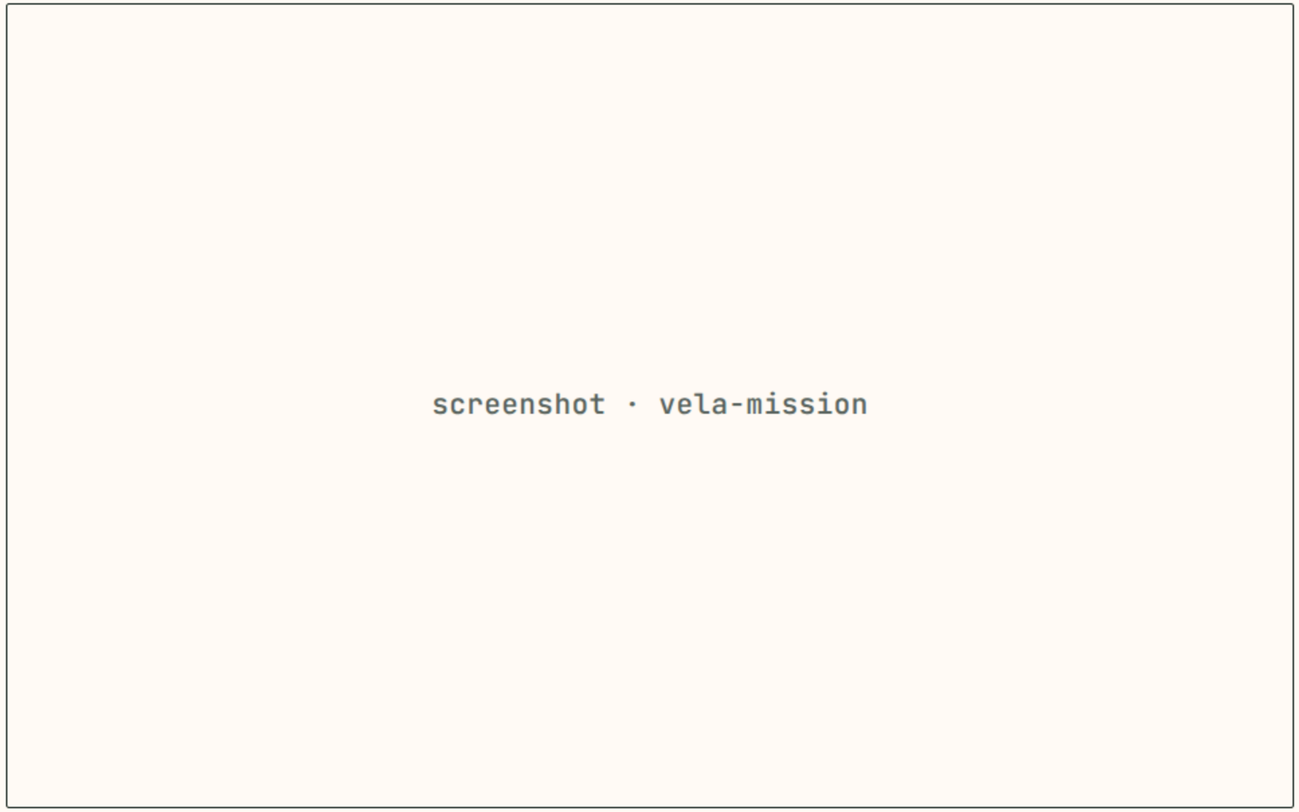

[day one]

Five pages. That's all you need on day one.

01 · mission	02 · customers	03 · rituals	04 · decisions	05 · vocabulary	+ read me first

[01 · mission]

Why you exist, and what you refuse to do.

vela ai · demo workspace · fictional data

[02 · customers]

Who you serve, in their own words.

vela ai · demo workspace · fictional data

[03 · rituals]

How your team meets, decides and ships.

vela ai · demo workspace · fictional data

[04 · decisions]

What you decided, and why.

vela ai · demo workspace · fictional data

[05 · vocabulary]

The words you use, and the ones you ban.

vela ai · demo workspace · fictional data

[+ read me first]

One page that tells any human or AI where to start.

vela ai · demo workspace · fictional data

[live]

Let’s build it.

[two workers]

Same context. Two different workers.

notion agent

claude

[notion agent]

Lives in your workspace.
Acts on your databases.
Runs on its own.

[claude]

Thinks deeper. Works across your tools. Sits next to you.

[use case 01 · notion agent]

A new hire asks how we decide. The workspace answers.

answer · tested with claude on the same pages

Who decides: Dan for product and ops, Nadia for pricing, go-to-market and hiring. A decision goes Proposed, then Active. Reversed rows are never deleted. Not written down yet: laptop, tool access, onboarding buddy. Ask Nadia or Dan.

[use case 02 · notion agent]

Three customer calls become two proposed decisions.

expected output · 2 rows added to decisions

Proposed · Post failure alerts to the customer's Slack or Teams channel the moment a sync fails. Source: 3 of 3 customer notes. Changes the Active decision "Monday email digest".

Proposed · Route each alert to the owner of the table. Source: 3 of 3 customer notes.

[use case 03 · claude]

October's investor update, written from your metrics.

claude · 199 words

Highlights: MRR 16,200, up 7.2% on September. Pipeline 98,000, up 26%.

Lowlights: customers flat at 9. Burn up for the fifth month running: 54,100.

Cash and runway are not in Metrics, so they are not in this update.

[use case 04 · claude]

A cold email that sounds like you, with zero banned words.

claude · 89 words · 0 banned word

When a sync fails at a logistics company, operations often hears last. One customer put it this way: "It failed on the Tuesday. We found out on the Friday, from our own customer." [...] When a stock number moves overnight, who finds out first today?

[use case 05 · notion agent]

Every Monday, last week's decisions land in one digest.

expected output · every monday 9:00

Decisions digest, week of 2 Nov 2026

Proposed: alerts in Slack or Teams · alerts to the table owner

Active: none new · Reversed: none

[use case 06 · claude]

Before you launch a free plan, Claude argues against it.

claude · every point cites a page

Against: it collides with three Active decisions (free 30-day pilots with a named owner, selling to the head of operations, one flat price per source). Burn is up five months running.

For: self-serve worked before.

Recommendation: no free plan. The free pilot stays the way in.

[use case 07 · claude]

Your landing page, checked against your own vocabulary.

claude

4 banned words caught: AI-powered, real-time, seamless, run. "Pay per run" contradicts the Active pricing decision.

Rewrite: Vela AI checks every table after each sync and emails the owner the moment a check fails. Stop finding out on Friday what broke on Tuesday.

[in the chat]

Which one would you hand to an agent first? Type 1 to 7.

1	A new hire asks how we decide. The workspace answers.	notion agent
2	Three customer calls become two proposed decisions.	notion agent
3	October’s investor update, written from your metrics.	claude
4	A cold email that sounds like you, with zero banned words.	claude
5	Every Monday, last week’s decisions land in one digest.	notion agent
6	Before you launch a free plan, Claude argues against it.	claude
7	Your landing page, checked against your own vocabulary.	claude

[rule of thumb]

Notion Agent for the routine. Claude for the thinking.

[this week]

Write your Read me first page. Then ask your AI one question.

[take it with you]

The starter template and what I learn next, in my newsletter.

ramalogic.com/newsletter

[q&a]

Your questions.

[thank you]

Thank you.
